

## Ultra Low Cost 3-Pin Microprocessor Reset

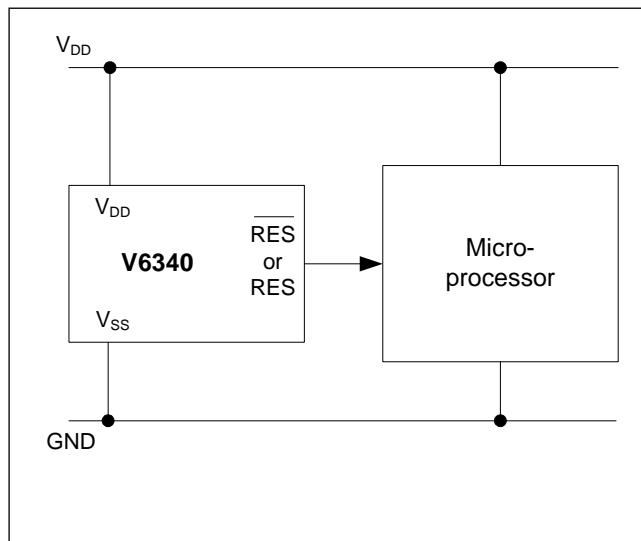

### Description

The V6340 monitors the supply voltage of any electronic system, and generates the appropriate Reset signal. The threshold must be chosen to the minimum allowed voltage which guarantees the good functionality of the system. As long as  $V_{DD}$  stays upside this voltage level, the output stays inactive. If  $V_{DD}$  drops below  $V_{TH}$ , the output gets active. The threshold voltage may be obtained in different versions: 2.6V, 3.0V, 3.7V and 4.4V.

### Features

- SOT-23 and TO-92 package
- Reset output state guaranteed down to  $V_{DD} = 1V$  @ 25°C
- Low supply current: stays stable during switching versions B, N, N: typ. 19 $\mu$ A at  $V_{DD} = 5V$   
other versions: typ. 38 $\mu$ A at  $V_{DD} = 5V$
- $\pm 2.5\%$  voltage threshold accuracy
- High noise immunity
- No external components required
- Push-pull or Open drain output
- Pin compatible with MAX 809 in SOT-23, by appropriate layout on PCB
- Pin compatible with MC 33164 in TO-92
- TTL output compatibility

### Absolute Maximum Ratings

Parameter	Symbol	Conditions
Voltage at $V_{DD}$ to $V_{SS}$	$V_{DD}$	-0.3V to +8V
Minimum voltage at RES or $\overline{RES}$	$V_{min}$	$V_{SS} - 0.3V$
Maximum voltage at RES or $\overline{RES}$	$V_{max}$	$V_{DD} + 0.3V$
Storage Temperature Range	$T_{STO}$	-65°C to +150°C

Table 1

Stresses above these listed maximum ratings may cause permanent damages to the device. Exposure beyond specified operating conditions may affect device reliability or cause malfunction.

### Handling Procedures

This device has built-in protection against high static voltages or electric fields; however, it is advised that normal precautions be taken as for any other CMOS component. Unless otherwise specified, proper operation can only occur when all terminal voltages are kept within the voltage range.

### Operating Conditions

Parameter	Symbol	Min	Max	Unit
Operating Temperature <sup>1)</sup>	$T_A$	-40	+125	°C
Positive Supply Voltage <sup>2)</sup>	$V_{DD}$	1	5.5	V

Table 2

<sup>1)</sup>The maximum operating temperature is confirmed by sampling at initial device qualification. In production, all devices are tested at +25°C

<sup>2)</sup>  $V_{DD} = 1V$  guaranteed at +25°C (see Fig. 14 for more information)
